Detox Protocols

Eliminating Toxins

- Lymphatic Therapy
- Chelation Therapy
- Deep-Tissue Massage
- Infra-Red Sauna
- Colonic Therapy
- CellGym Oxygen Therapy

UP TO 80% OF THE CHEMOTHERAPY TREATMENTS USED IN TRADITIONAL CANCER CARE DO NOT SHOW THE INTENDED SUCCESS IN PATIENTS. THIS IS BECAUSE STANDARD THERAPIES DON'T CONSIDER THE INDIVIDUALITY OF RESPECTIVE CANCER TUMORS - OR OF THE PATIENT - AND CONSEQUENTLY TEND TO WORK NON-SPECIFICALLY AND THEREFORE INEFFECTIVELY.

MISKAWAAN APPROACH

Miskawaan uses the very latest in early cancer detection and tumor identification tests to ensure a full understanding of the exact profile of the tumor and the patient's overall physical condition, thereby allowing our doctors to create tailored medicines and other healing protocols that are most effective for the individual patient.

Metavectum Tumor Therapy Test

Using advanced medical technology, the Metavectum test runs biopsy specimens ranging from solid tumors to circulating tumor cells (CTCs) isolated from the blood of the patient. It generates accurate analysis of gene mutations, protein levels and tumor metabolism and provides key information for doctors to tailor optimised cancer therapies to suit the individual's unique health profile.

EDIM Technology for Cancer Diagnosis

EDIM technology from Germany is able to detect more than 50 types of tumor using a simple blood test. It hugely increases the chance of detecting cancer early, even tumors for which specific tests are not yet available. Screening with EDIM is fast, comfortable and risk-free.

Metavectum Predictive Diagnostic

This test is used to detect early impairment of malfunctioning metabolic biomarkers. Analysis of low molecular weight compounds and their corresponding enzymes provide a full picture of the metabolome. The test tracks metabolic changes pre- and post-cancer treatment, serving as an indicator in the event of relapse or cachexia.

CANCER SCREENING PACKAGE

The Miskawaan Cancer Recovery Journey

- Doctor Consultation & Individual Profiling
- Cancer Diagnostic & Testing (2-5 weeks)
- Treatment Plan Formulation
- Therapy Production & Treatment Delivery
- Rebuilding the Immune System
- Post Treatment Monitoring & Follow-up Consultations
